

S.No.	Evaluation Criteria	Marks	What to Evaluate
1	Project Objective & Requirements	2	Clear problem statement, objectives, requirements, and relevance of the project
2	System Architecture & Design	4	Appropriate technology/service selection, architecture design, scalability, reliability, and logical implementation
3	Implementation & Functionality	4	Working application, correct integration of technologies/services, and successful execution of major features
4	Security & Access Control	2	Authentication, authorization, access control, data protection, and secure configuration
5	Database & Data Management	2	Appropriate database/storage selection, data organization, CRUD operations, and data management
6	Deployment & DevOps	2	Deployment process, automation/CI-CD where applicable, configuration management, and reproducibility
7	Monitoring, Performance & Optimization	1	Monitoring, logging, performance analysis, resource utilization, and optimization
8	Documentation & Presentation	2	Architecture diagram, documentation, screenshots, demonstration, and explanation of technical decisions
9	Innovation & Problem Solving	1	Creativity, additional features, technical challenges, and problem-solving approach
